Crawling & Indexing

1 0

Description

Your website's pages must first be properly crawled and indexed to appear in search engine results. This section contains checks for main factors that can affect search engine crawlers' scanning and indexing of your site.

ISSUES	PAGES	NEW	FIXED
Robots.txt is not accessible	1	0	0

Issue description

Our bot could not access the robots.txt file on your website. We either received an HTTP code that denied us access to the file, or the server could not fulfill the request.

How to fix

Ensure you don't have a firewall or plugin blocking bots. If you do, whitelist our Website Audit user-agent on that system. We also recommend adding our IPs to the server's whitelist.

Redirects

37 74

Description

Misconfigured redirects can lead to incorrect locations. This can confuse users, ruin their experience, increase the number of HTTP requests to your website, and result in a traffic drop and crawling budget decline. The checks in this section help you maintain control over your redirects and pinpoint room for improvement related to them.

https://agseo.pro/compare/semrush-vs-ahrefs			

Issue description

Redirect chains occur when a redirect is set up from page 1 to page 2, and from page 2 to page 3. There may be more than three links in a chain, but the longer the path to the target page is, the slower the page will load. Redirect chains negatively affect the user experience, and also complicate the crawling process for search engine robots.

How to fix

Remove unnecessary links from the chain by setting up a redirect from the first version of the page directly to the page's current address.

Issue description

The pages indicated in the report return a 3XX response code, meaning that a redirect is set up from such pages. The 3XX response code in itself is not a problem, but each redirect puts an additional load on the server, so it's better to remove unnecessary internal redirects.

How to fix

Make sure that the number of 3XX pages on your website does not exceed 5% of the total number of pages. If their number exceeds 10%, then you have a critical problem, and you should immediately remove some of the redirects.

Sitemap

0 37

Description

A sitemap is a file that contains a list of all the URLs on a website that crawlers should be aware of. It must be free of irrelevant or invalid URLs to prevent it from hurting your crawl budget. The checks in this section help ensure your sitemap remains in place and error-free.

Issue description	How to fix

ISSUES	PAGES	NEW	FIXED

The XML sitemap contains URLs that redirect visitors from one page to another via 3XX redirects, which, in turn, can drain the crawl budget and lead to website indexing issues.

Replace redirecting URLs in the XML sitemap with destination URLs. If a destination URL is already in the XML sitemap, you should delete URLs with 3XX redirects from the XML sitemap.

Content

0 1

Description

Content is the core of your SEO efforts and results. This section contains the most popular checks related to the technical health of your website's content.

ISSUES	PAGES	NEW	FIXED
No WWW redirect	1	0	0

Issue description

This check analyzes to see if you have set up a www to non-www redirect and vice versa on your website. Having your website load with and without www can lead to duplicate content issues.

How to fix

If necessary, redirect all non-www URLs on your website to www.

Links

1 1

Description

Internal links help search engine crawlers discover new web pages and ensure link equity distribution across the website. External links help support ideas and facts expressed in content with data from external sources. Both are indispensable components for a good user experience. However, they can ruin it if they don't work properly. This section checks whether the links on your website work correctly. It also suggests improvements if it discovers any issues.

ISSUES	PAGES	NEW	FIXED
No inbound links	1	0	0
https://agseo.pro/			

Issue description

Some pages of the website don't have any internal links pointing to them.
Search engines can only find and index such pages if they are indicated in the XML sitemap or via external links.
Your website visitors cannot access such pages from other pages of the site.

How to fix

Check your website's internal linking and ensure that visitors and search robots can easily access every important page.

Internal links to 3XX redirect pages	1	0	0
https://agseo.pro/			

ISSUES	PAGES	NEW	FIXED

Issue description

Some internal links on your website point to pages whose URL has changed. Redirects allow both visitors and search engines to access the relevant page, but we still recommend you replace such links. In some cases, such links may cause the page to work incorrectly (for example, if the site was moved to HTTPS and internal links still use the HTTP protocol). Redirects also result in the loss of a small fraction of the link juice.

How to fix

Replace all internal links indicated in the report with up-to-date page URL addresses.

Internal links missing anchor	1	0	0

https://agseo.pro/

Issue description

Some internal links on your website have an empty or naked anchor (i.e., anchor that uses a raw URL), or the anchor text only contains symbols. When clicking on links without anchors, it may be difficult for both website visitors and search engines to understand what to expect to see on the page that you link out to.

How to fix

Review the links indicated in the report and, if necessary, add anchor texts or descriptive in-copy text around the link. Aim to use concise phrasing in anchor texts.

External links to 3XX	1	0	0

https://agseo.pro/

Issue description

Some pages that you link out to from your website redirect visitors to a completely different page. Perhaps the redirect was set up after you linked out to the website, and now the link can lead visitors to another page that does not contain the information they need.

How to fix

Manually look through every external 3XX link and make sure that redirected pages contain the necessary information. If there information is there, replace the link with the new version of the URL. If the required information is not available, replace or delete the link.
